

Welcome

to our aesthetic laser clinic on Walnut Hill Lane.

We are here to serve your health and beauty needs. Our primary focus is to provide state-of-the-art skin rejuvenation and age-reversing procedures using laser technology that is safe and effective. Major advances in laser technologies enable us to effectively treat undesirable skin conditions, such as vascular lesions (broken blood vessels), superficial fine lines and wrinkles, and sun damaged spots. The lasers can also be used for permanent hair reduction.

Our physicians and experienced professional staff offer the latest technology at an affordable cost, with flexible hours to accommodate you. The array of lasers at the clinic are highly effective in treating all skin types with little down time. We provide a wide range of skin care and aesthetic services to address aging skin, using treatments that complement each other for an integrative approach to skin health and beauty- all in a warm and caring atmosphere.

We offer complimentary consultations with our aestheticians. During your consultation, the aesthetician will discuss a customized treatment recommendation program to address your desire for healthier, more beautiful skin.

For further information on any cosmetic procedure, ask our staff for a free Patient Education Brochure. Each brochure describes what the treatment is like, how long it lasts and if there are any side effects.

Renew Your Skin

Aesthetic & Medical Treatments to Renew Your Skin

Laser Hair Removal

Imagine having smooth, hair free skin without shaving, waxing, plucking, or bleaching your unwanted hair.

Safely and effectively reduce unwanted hair from all parts of the body, leaving your skin feeling smooth and soft. Laser hair removal is effective for all skin types, including darker skin tones. Using the latest laser technology, we offer safe, fast, effective treatments for both men and women.

Laser Skin Rejuvenation

Medical laser technology has evolved to provide non-invasive, "no down-time" treatments that help improve the appearance of fine lines, poor skin texture, facial veins, birthmarks, sunspots, and age spots. A series of treatments stimulates new collagen production in the skin, bringing back the suppleness of youthful skin.

Laser Leg Vein Therapy

Laser therapy is a non-invasive, "no down-time" procedure that safely and effectively treats many types of leg veins, including shallow spider veins and reticular veins.

Microdermabrasion

Time inevitably takes its toll on your skin! Exposure to the sun and other elements causes your skin to become damaged and dull in appearance. Microdermabrasion offers many benefits to people of all ages and skin types. This non-surgical exfoliating treatment helps improve the appearance of sun-damaged skin, age spots, freckles, acne, acne scarring, fine lines and rough skin. The process is painless, non-invasive and can be combined with skin care, and light wave therapy to achieve overall beautiful skin.

Ultrasonic Facials

The Ultrasonic Skin Scrubber, like Microdermabrasion, removes the outer layer of dead skin caused by over-exposure to the sun and other elements. This treatment uses the unique benefits of therapeutic ultrasound and electrical stimulation to improve the skin. Ultrasonic facials are appropriate for all skin types, especially if you have thin skin, active acne, heavy areas of white or black heads, or skin too sensitive for Microdermabrasion. Experience immediately noticeable results, including smoother, more firm skin.

BOTOX® Cosmetic

After years of squinting, laughing, frowning, and worrying, the skin around the eyes and on the forehead will often develop deep lines and wrinkles called "expression lines". A frequent concern is that they often make you look older, tired, or stressed. Until recently, these advanced furrows have been difficult to treat. Now, by utilizing this FDA approved muscle-relaxing agent, you can smile, laugh, frown, and stop worrying about wrinkles!

Restylane®

A long lasting cosmetic filler that provides dramatic, immediate and visible results for improving the appearance of facial lines, wrinkles and folds by filling trouble spots caused by time and gravity. Restylane® is also used to plump lips, fill in scars and restore volume and fullness to the skin - giving you a more youthful and invigorated look.

LightWave Therapy

Light Wave Therapy can help improve the appearance of tired, flaccid skin - including breasts and abdomen, stretch marks, spider veins and cellulite. This innovative procedure helps restore skin tone by improving superficial circulation, which helps to stimulate the production of elastin and collagen. Results include a younger-looking, smoother and more toned body. Light Wave Therapy significantly enhances all other anti-aging treatments including chemical peels, microdermabrasion and stretch mark creams.
